## Objective

- glance over the built-in wavelet families and their wavelet members in PyWavelets library.

## 1. Display Built-in Wavelet Families

`pywt.families(short=True)` : returns a list of available built-in wavelet families

```
In [17]: import pywt
```

```
In [18]: pywt.families()
```

```
Out[18]: ['haar',  
          'db',  
          'sym',  
          'coif',  
          'bior',  
          'rbio',  
          'dmey',  
          'gaus',  
          'mexh',  
          'morl',  
          'cgau',  
          'shan',  
          'fbsp',  
          'cmor']
```

```
In [19]: pywt.families(short=False)
```

```
Out[19]: ['Haar',  
          'Daubechies',  
          'Symlets',  
          'Coiflets',  
          'Biorthogonal',  
          'Reverse biorthogonal',  
          'Discrete Meyer (FIR Approximation)',  
          'Gaussian',  
          'Mexican hat wavelet',  
          'Morlet wavelet',  
          'Complex Gaussian wavelets',  
          'Shannon wavelets',  
          'Frequency B-Spline wavelets',  
          'Complex Morlet wavelets']
```

## 2. Display Built-in Wavelet Members

`pywt.wavelist(family=None, kind='all')` function: returns a list of names of the built-in wavelets.

- family: Short family name.
- kind : {'all', 'continuous', 'discrete'}, optional.

### (1) All families and both kinds

```
In [20]: pywt.wavelist()
```

```
